

Team Score Card

Team / guild: _____ Opening gold: 10

Use one card per team. Ticket counts are NEW charges assigned to this team, including rework detected elsewhere. Cost = 1 x N4 + 2 x N8 + 7 x N32. Charge once at issue. Hours served are separate. Complete the settlement row after round 15.

Round	d6 / base	Event / signal	Solution / owner / due	N4	N8	N32	Hours served	Good units	Cost	Gold

Settle										

Cycle 1: rounds 1-5. Cycle 2: rounds 6-10. Cycle 3: rounds 11-15. Signals: G, YF, YA, R, Vendor, Idle. Base capacity is 1 or 2; no-roll maintenance uses base 2. Actual transferred units are 0, 1 or 2.

Factory Control Sheet

Factory Manager: _____ Mode / whole-game target: _____

Record end-of-round buffers after all transfers. Approved units are shipments this round, not all teams' output added together. Opening buffers and cumulative shipments are zero. Keep running team cash on the team cards.

Round	C1 buffer	C2 buffer	C3 buffer	Subassembly buffer	Final buffer	Approved this round	Cumulative approved	Vendor count	Protected through

Factory result: _____ Target met: _____ All six teams above zero after settlement: _____

Outstanding repair hours by team: _____

Record each vendor vote, counter reset and all three shop tickets in the incident register. Protection ending in round r permits raw-material events again in r+1.

Incident Register and Debrief

Copy this page if more space is needed.

Cycle discussion

After each cycle, record actual approved output, the main constraint, a proposed change and the next-cycle action. Explain how the action helps the whole factory rather than only your team's gold.

Cycle 1: _____

Cycle 2: _____

Cycle 3: _____
